

ENERGY POLICY

The management of Selvafil, S.A., as a highly energy-consuming company and on the global stage of growing need for energy, climate change, prices increase and evolution of renewable energies, has decided to implement an Energy Management System based in the standard ISO 50001:2018. This system is intended to have a positive impact in the company results and the environment.

Therefore, the Management makes the following commitment:

- To apply to the company continuous energy improvements through a good implementation and management of the Energy Management System and a systematic evaluation of its achievement. This improvement will apply both the system and the energy efficiency.
- To set goals and objectives of energy consumption and CO₂ emissions.
- To always provide the system with the necessary, documentary, information and material means for its operation and to achieve the set goals and objectives.
- To ensure the compliance with current legislation on energy and other standards related to energy efficiency, use and consumption.
- To gradually incorporate energies from renewable sources.
- To improve the energy efficiency of the installations and the productive assets through the acquisition of new products and energy efficiency services to improve the energy performance and to design new production facilities focused on energy efficiency.
- To keep up to date of variables influencing climate change relevant to the parties concerned and take actions on those activities that have an impact.

This policy is published and knowledge and understanding of it is mandatory for all staff of the Company and it is available to all our stakeholders.

Approved by the General Management in Maçanet de la Selva, April 2024.
